# VISION

As a holder you will get rewarded. You will receive BUSD automatically to your wallet

BUT that is more for our daily fun. PAYDAY is our target.

2% of all volume goes to dev wallet. Funds which you usually won't see but devs goes to Bahamas with them, but not here.

On a first day of every month a snap shot will be taken of holders on that day.

After one month on the last day of the same month when snap shot of holders was taken we take another snapshot of holders.

Then we compare. Only the holders who are on both snapshots taken will share 50% of the PAYDAY funds. Other half of the funds will be taken to the next months funds and will keep increasing until the next PAYDAY. -->

# VISION

So imagine. There were 100 holders on day one, but only 10 remains until the end of the month. So only 10 holders will share to funds at that point

Funds will be shared as share of tokens held by a holder but the share will not be counted comparing your holdings to total supply but your compred to these who will get their share of the PAYDAY. So your 1% holding of the total supply could easily be like 10% of the PAYDAY funds.

Holders always win here, remember that.

And yes, you are free to trade between 1st and last day but make sure you hold your tokens when last day snap shot will be taken.

Your last day holdings MAX for PAYDAY share of funds is same as it was on when 1st snap shot was taken. So load as much as possible before 1st snap shot
